

This sheet is simply to assist you in recording your measurements, so you can easily refer back to it when placing an order online via the phone. **Please DO NOT send us this form.**

We recommend a competent person carries out the task. Please check the relevant guides available on the website for further help and guidance on measuring. We are also on hand to advise on any aspect of the survey process, please call **01435 515001** for friendly advice.

Our Top Measuring Tips

- Measure in 3 places and deduct 10mm from the smallest measurement to allow for clearance.
- Measure to the underside of the existing sill unless it is NOT going to be replaced, i.e. a concrete sill is present. If you **do need** a sill then enter the overall height measurement including the sill.
- Check diagonals to ensure the aperture is square, there should be a difference or more than 5mm between the two sizes.

Width top:	<input type="text"/>	mm	Width middle:	<input type="text"/>	mm	Width bottom:	<input type="text"/>	mm
Height left:	<input type="text"/>	mm	Height middle:	<input type="text"/>	mm	Width right:	<input type="text"/>	mm

Now simply deduct 10mm from the smallest size and this will be the final frame size that you can order with.

Overall width:	<input type="text"/>	mm	Overall height:	<input type="text"/>	mm
